

For the last 10 years, Dr. Michael Fraser has worked for Naval Facilities Engineering Command Southwest in San Diego. Through his direct involvement with Department of Defense vertical construction and infrastructure projects, he has developed substantial knowledge in the fields of geotechnical engineering, seismic design, seismic rehabilitation, and structural dynamics, and proficiency analyzing and mitigating seismic risks for both new construction and existing structures. His firsthand experience with difficult site conditions provides real-world insight into the current seismic design codes, criteria, and standards-of-practice. Dr. Fraser earned his Masters and Ph.D. degrees at the University of California, San Diego (UCSD).
